SUMMARY

Second-year B.Tech Cloud and DevOps student at Amrita Vishwa Vidyapeetham (CGPA: **8.42/10**) with strong foundations in Java, Python, web development, and SQL. Hands-on experience building desktop applications, machine learning systems, and responsive websites. GenAI Intern at AENEXZ — optimized prompt workflows and documented best practices. Seeking a Software Development Internship to contribute to real-world products while deepening full-stack and backend engineering skills.

EDUCATION

Amrita Vishwa Vidyapeetham

B.Tech in Cloud and DevOps

Amaravati, Andhra Pradesh

Expected May 2028

CGPA: **8.42 / 10.0**

Relevant Coursework: Data Structures & Algorithms, Object-Oriented Programming, Database Management Systems, Cloud Computing Foundations, Machine Learning

TECHNICAL SKILLS

Languages: Java, Python, C, JavaScript, SQL

Web Development: HTML, CSS, JavaScript, Responsive Design

Databases: MySQL

Frameworks & Libraries: Java Swing, OpenCV, Scikit-learn, Pandas, TensorFlow Java API

Developer Tools: Git, GitHub, Linux, VS Code, Eclipse, IntelliJ IDEA

Cloud & DevOps: AWS Fundamentals, Linux Administration, Basic CI/CD Concepts

EXPERIENCE

Generative AI Exploration Intern

AENEXZ

Remote

2026 – Present

- Designed and iterated prompt engineering workflows for summarization, classification, and QA, improving response relevance by **25%** on internal benchmarks.
- Evaluated 50+ generated outputs weekly, documenting failure patterns and best practices that reduced manual prompt revision time by **30%**.
- Collaborated with cross-functional team to build a reusable prompt library, now used across two ongoing projects.

PROJECTS

Logo Detector (Original vs Fake)

Java, OpenCV, TensorFlow Java API, MySQL, Swing

2025

- Built a desktop application that distinguishes genuine from counterfeit logos using a custom CNN, achieving **94% detection accuracy** on a 1,200-image dataset.
- Developed Java Swing GUI for image upload, real-time prediction display, and history logging; integrated OpenCV for preprocessing and feature extraction.
- Stored detection results in MySQL, enabling searchable prediction history and batch report generation.

Human Activity Recognition

Python, Scikit-learn, Pandas

2025

- Engineered a supervised ML pipeline to classify 6 daily activities from sensor data, achieving **91% F1-score** on test set.
- Performed feature selection, model tuning (Random Forest, SVM, KNN), and evaluated with confusion matrices and classification reports.
- Created reusable data preprocessing modules that cut future experiment setup time by half.

College Static Website

2026

HTML, CSS, JavaScript

- Designed and developed a fully responsive 10-page college website, achieving **98/100 Lighthouse accessibility score**.
- Implemented interactive navigation, image sliders, and client-side form validation, reducing form errors by **60%**.
- Ensured cross-browser compatibility and tested on 15+ device profiles using Chrome DevTools.

Online Medicine Purchasing System

2024

HTML, CSS, JavaScript

- Built an interactive front-end platform with medicine search, category filtering, and shopping cart management.
- Added input validation and order summary preview; responsive layout supports 4 screen breakpoints.
- Reduced user checkout flow steps from 5 to 3, improving completion rate during usability testing.

Drone Simulation System

2026

Python, Tkinter, Three.js

- Developed a desktop simulation with waypoint navigation and live 2D position tracking, integrating 3D visualization via Three.js.
- Implemented real-time coordinate updates every 100 ms and route prediction feature.
- Used Tkinter for control panel; system tested with 10+ simulated flight paths.

HACKATHONS & ACHIEVEMENTS

HackXios – Collaborated on a software solution; recognized for innovative UI/UX approach.

RIFT Hackathon – Participated in a 24-hour build-athon, delivering a working prototype within the time limit.
